

Dear Dr. Nash,

Since April this year I've been using IminoHoney to help and assist me from cancer in my Lymph system. I've experienced a lot of improvements. Since then I've advised a lot of people to use this wonderful product.

My neighbour is also willing to use this product. I expect there will be more in future. She has her own healing practice at her home but she is very ill now so I would like to order for her also now.

Looking forward to hearing from you.

Kind regards,

YdG The Netherlands October 2021

James W. USA Story August 2020

I would like to put together a summary of how your product has been a major benefit assisting me in my recovery. Thinking back on how it all started. I believe would make a good story for one of your user groups to consult as a guide. I will retrace the events of my journey and the use of your product!

My diagnosis came in early January of 2018. I had two tumours attached to my bile ducts, some of the lymph nodes involved, and a liver full of a vicious cancer. After the surgery to remove the bile ducts, the lymph nodes, and over seventy-five percent of my liver, I was told I needed to get my affairs in order as I would not be alive by December of 2018. Returning to our home in late February my brother-in-law said he knew of a product, an IminoHoney, that had achieved excellent results in assisting various cancers, and he wanted me to include it with my treatment program.

My oncologist started me with a traditional chemo cocktail treatment March of 2018 but didn't expect it to have the kind of effect necessary to arrest my cancer and we would have to go with a DNA based IminoHoney therapy. I didn't tell my oncologist of my "other" separate side treatment.

A month into the first treatment, my first CT scan showed a dramatic reduction of the cancer veining left in my liver. My oncologist was amazed at my results and elected to leave me on the traditional chemo treatments. I never suffered the ill effects most go through and three chemo treatments later he proclaimed I had no new cancer issues growing. I continued with my quarterly CT scans but took no additional chemo therapy, only my secret IminoHoney. I am now coming up on the anniversary of my third year, my liver is fully functional with no signs of disease, it has grown back most of what was removed, am living my life as if nothing ever happened, and feel it is all due to my secret, IminoHoney.

My Dad, Mike X started feeling ill with aches and pains and very tired. The doctor thought he might have prostate problems and sent him for a blood test for PSA. This is normally on a scale of one to five but Dad's PSA was twelve. This suggested that he might have cancer. Then they scanned his neck and jaw where he'd been getting lots of pain. This showed signs of possible bone cancer in five places. The doctors suggested injections that might help fight prostate cancer, but said something else would be needed to fight bone cancer. We were all very worried. He has had no treatment for this yet.

By chance a friend of Dad who used to be a research scientist heard about Dad's problems. and, by chance, had just been talking to a friend of his called Professor Robert Nash who heads a team in Aberystwyth University called 'Phyto Quest'. They had been working for years on a honey produced from special flowers which seemed to have special powers for healing cancer in animals that were very ill. They call it 'IminoHoney'. Robert gave Dad some and he was told to take 5ml every day.

Very soon Dad's bone aches disappeared even though he had had no other treatment for bone cancer. Dad also had the first of a series of injections which might help lower the PSA level and fight possible prostate cancer. He is due his second injection next week but this week he had a PSA test to see if the level had fallen. The doctor was astounded! Dad's level had fallen to 0.1, which is below even the normal range. This was amazing, and a much greater effect than what would be expected from a single injection.

Dad has asked for more of the IminoHoney and hopes he'll continue getting better. We can't be sure that the honey is responsible for the changes, but we certainly hope he can keep using to assist him.
